

Build a shark game

Wow your friends with this game about plastic pollution.

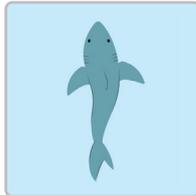

What you will need:

- A computer
- Access to the internet
- Lightning-quick reactions

How does it work?

This project uses a free, online coding language called Scratch. By creating programs using Scratch, you can improve your problem-solving skills. This game teaches you to generate and delete clones, and use random numbers to change the costumes of sprites.

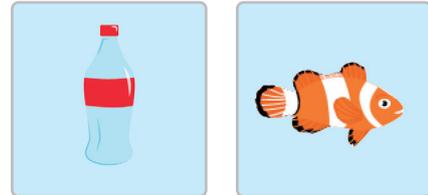

Shark code

```

when clicked
  go to x: 0 y: -120
  set health to 20
  forever
    if mouse down? then
      if mouse x < x position then
        change x by -10
      if mouse x > x position then
        change x by 10
      if health < 1 then
        stop all
  
```

Plastic and fish code

```

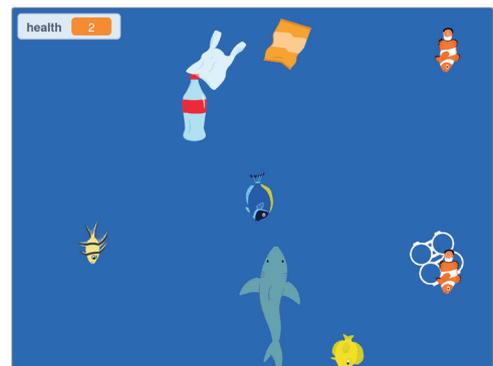

when clicked
  go to x: 0 y: 200
  hide
  forever
    create clone of myself
    wait pick random 1 to 5 seconds

when I start as a clone
  show
  switch costume to pick random 1 to 4
  go to x: pick random -200 to 200 y: 200
  set speed to pick random -1 to -10
  repeat until y position < -180
    change y by speed
    wait 0.1 seconds
  delete this clone
  
```

```

when I start as a clone
  forever
    if touching Shark? then
      change health by -5
      delete this clone
  
```

Change this number to 1 for the fish sprite.

Instructions

- 1 First, go to rpf.io/save-the-shark- on to open the starter project in Scratch.
- 2 Click on the shark sprite (icon) on the right-hand side of the screen. Build the shark code by selecting the colour-coded blocks from the menu on the left-hand side of the screen. Drag the blocks onto the blank space

- 3 For the third block, you'll need to use the "Make a Variable" button. Label the variable "health" and select the "For all sprites" option.
- 4 Now, click on the plastic sprite, and build the code above. You will also need to make a new variable for this, named "speed".

- 5 Finally, add a new sprite next to your shark and plastic sprite, by clicking the "Choose a Sprite" button and selecting the fish.
- 6 The code for the fish is almost the same as for the plastic sprite. Drag and drop the blocks into the fish icon to duplicate. On the final set of blocks change the "health" number to 1 instead of -5. The game is ready!

The Raspberry Pi Foundation is a UK-based educational charity working to put the power of computing and digital making into the hands of people all over the world. Discover more step-by-step coding projects at rpf.io/
